Grower's Name	

Alerts

It shows the plants where there is any problem
Like

Temperature problems

PH problems

Water level problems

Humidity problems

And also proposes suitable remedy for it

Like if the Temperature is high then on the cooler

Like If the water is acidic then add an alkali

Disease Detection

(Where the ML Model is being used)

Whenever the user enters the picture of the plant or leaf with disease then it must predict what kind of disease is it and preventive measures

Enter the image

Disease Prediction

Name of the disease

Cause of the disease

Preventive measure like adding medicines or fertilizers or trimming the plant itself so it doesn't spread to others
